

Comments

Use comments to include nonexecutable text in your code as a note or reminder to yourself. Comments are ignored by the Swift compiler when your code is compiled.

Comments in Swift are very similar to comments in C. Single-line comments begin with two forward-slashes (//):

```
// This is a comment.
```

Multiline comments start with a forward-slash followed by an ^{별표}asterisk (/*) and end with an asterisk followed by a forward-slash (*/):

```
1  /* This is also a comment
2  but is written over multiple lines. */
```

Unlike multiline comments in C, multiline comments in Swift can be nested inside other multiline comments. You write nested comments by starting a multiline comment block and then starting a second multiline comment within the first block. The second block is then closed followed by the first block:

```
1  /* This is the start of the first multiline comment.
2     /* This is the second, nested multiline comment. */
3  This is the end of the first multiline comment. */
```

Nested multiline comments enable you to comment out large blocks of code quickly and easily even if the code already contains multiline comments.
